

Infinity Eclipse T4 Wrapper

ADVANTAGES

- Small machine footprint
- Very accessible for operation and maintenance
- Quick and easy changeovers using adjustment motors
- User friendly HMI with aided operation & change overs
- High quality packs

The Infinity Eclipse T4 poly wrapper for tissue and towel rolls is designed with Italian refinement and built with American ruggedness. This combination creates a machine that easy to operate, low on maintenance, flexible and generates overall line efficiency. The Eclipse T4 can accept four lanes of infeed from an infeed conveyor (five lane optional) and then separates the product via a servo choke belt infeed into the flight bar stacking section. The machine then synchronizes each layer into a secondary flight bar system for loading onto the elevator and then into the overhead system. The overhead section operates using a brush style head folder system which creates continuous forward motion and the product and does not pull back on the poly. The overhead unit also features 24 overhead trolleys which reduces the amount of time required for changeovers.

The poly unwind system is located directly opposite of the roll infeed and is designed to consistently and accurately place a sheet of poly around the rolls in order to ensure a high quality finished package. The Infinity Eclipse T4 poly wrapper is engineered to perform.
