

# INFUSION 3.1

The ultimate in 3  
in 1 packaging  
flexibility.

- Save space and capital
- Broaden product offering
- Compatible with casepacker, bundler and bagger modules
- Offers complete mobility
- Three programs within the same PLC
- Quick air / electrical connection plugs
- Re-configure modules within minutes
- Common infeed conveyor saves time and money
- Can purchase modularity up front

If you're looking to save on floor space and large, multi-machine capital investment, look to the Infusion 3.1. Our patented, modular packaging system utilizes a fixed-infeed docking station, which can be coupled with modules that are moved in and out of the docking station to give you 3 machines in 1! Cases, bundles, and bag production can easily be swapped out with a hand jack to give you a broader range of product packaging. This revolutionary modular system is the "industry original" and was first created to solve the limitations of fixed linear machines. Infusion 3.1 is truly a unique modular system with limitless flexibility.

# Infusion 3.1

## Quick connect benefits.

- Enhanced flow during line interrupts.
- Insights on how the conveyor affects the product.
- Maximize continuous uptime.
- Minimize backpressure caused by unrefined programming.
- Optimize number and placement of drives.
- Optimize number and placement of photo eyes.
- Optimal method of control for the drive.

## Look out for...

This icon represents machines that are compatible with our Infusion 3.1 system.

## Unique Solutions for Packaging Flexibility

Save space  
and capital

Move modules  
from line to  
line, or even  
plant to plant

Broaden your  
product offering
